EconoGrid 40 Gravel - Driveway and Nature Strip

Location: Sydney
Product: EconoGrid 40
Application: Gravel Driveway & Nature Strip

The Brief

Client required parking bay for Caravan and support for Nature strip when Caravan was driven across turf. Current Driveway is exposed aggregate concrete, owners requested a free draining surface which blends into their existing driveway.

The Solution

EconoGrid 40 laid on compacted road base (approximately 50mm) and course sand (approximately 20mm). 10mm Nepean river pebbles were used to backfill the Econogrid 40, followed by a turf roller to level.

EconoGrid 40 applied under the turf on the nature strip will support the turf and protect its root system when the client drives over it to position caravan. Turf used was Sir Walter Buffalo.

Conclusion

A fabulous and aesthetically pleasing result. The caravan has its dedicated area, with a surface that will hold the weight and demands of the caravan.

The nature strip will be able to support the turning of vehicles while protecting the turf and allowing rain water to infiltrate to ground minimising runoff and water retention on the turf. Ensuring strong, thicker turf surface.
